

## Brunel Long Arm Stereomicroscope

Long Arm Stereomicroscopes consists of a long arm base but can have a number of different stereo heads attached. The choices are the BM1, BMX, IMXZ, BMS, BMZ and the BSR Long Arm stereomicroscope.

The BM1 Long Arm is a budget priced instrument. The BM1 has an excellent optical performance with x10 widefield eyepieces x1 and x2 objective pairs supplied as standard.

The BMX Long Arm can be supplied with either the bench edge clamp long arm, or a single boom heavy duty base with x10/x30 or x20/x40 magnification options.

The IMXZ range are well designed and proved to be very reliable. The stereo head has a continuous zoom range of x10 to x40, with the super widefield x10 eyepieces.

The BMS series is our latest addition to this range with an optical quality that we believe cannot be bettered within this price range. A magnification zoom range of x10 to x40 make this a popular choice.

The BMZ series has an excellent optical performance with a zoom range of x7 to x45, making it a popular model for commercial applications.

The BSR series offers single and double boom stands together with hydraulic arm and bench clamp options, with a magnification potential of x3 to x225.
